## CASH RECEIPTS FROM FARMING IN OHIO - 1960

Cash receipts from the sale of farm products in 1960 in Ohio increased about 5.7 percent over the revised estimate of the 1959 cash receipts. An increase in Government payments of 20 percent over 1959 brings the increase in total cash receipts to 6 percent above the 1959 income level.

The 1960 cash farm income including Government payments, was \$1,022,983,000 the highest since 1956 when the cash farm income was \$1,028,441,000.

Excluding Government payments, cash receipts from all farm enterprises in 1960 totaled \$1,003,775,000. The receipts from livestock and livestock products are expected to be \$595,060,000, an increase of 2.2 percent over the 1959 comparable total. The receipts from crops of \$408,715,000 show an increase of about 11 percent over the preceding year.

The upswing in the cash income from crops in 1960 is largely due to the higher yields for wheat, oats, and corn in 1960. The total cash receipts from wheat increased 58 percent over the 1959 calendar year receipts. Corn income was up 7 percent over 1959. Cash income from oats in 1960 was up 31 percent.

Dairy products was the largest single item in cash farm income in Ohio in 1960, followed by hogs, with cattle and calves ranking third. Dairying ranks first as a source of farm income in 45 counties, with hogs first in 14 counties.

The four leading counties in total cash receipts in 1960 are Fulton, Darke, Wood and Wayne, all with over \$25,000,000 in cash receipts. Fulton led all counties in income from cattle and calves and Wayne had the highest income from dairy products.

These estimates of cash income should not be confused with gross farm income, which includes other agricultural income, such as the value of home consumption, or with net farm income, which makes an allowance for farm production expenses.

The average per farm and per acre columns in Table IV are derived by using the number of farms and the acres of land in farms from the 1959 U. S. Census of Agriculture. They are not strictly comparable with the averages in the 1959 Ohio Farm Income bulletin, partially due to the change in definition of a farm between the 1954 and 1959 Census enumeration.

ESTIMATED CASH RECEIPTS BY OHIO FARMERS FROM THE SALE OF  
AGRICULTURAL PRODUCTS AND FROM GOVERNMENT PAYMENTS.  
BY COUNTIES - 1960

Explanations

The purpose of this study is to estimate the 1960 cash receipts from farm marketings for each of the 88 counties in Ohio. Cash receipts, in this study, denotes the actual cash receipts from the sale of agricultural commodities in the county; however, interfarm sales of livestock, the value of crops used for feed, seed and household use, and income from outside work or investments are excluded. Therefore, the data do not necessarily indicate the relative importance of the various enterprises, but rather their importance as sources of cash receipts. These estimates of cash receipts should not in any way be confused with the net income of Ohio farmers.

Similar estimates of cash receipts by Ohio farmers have been made for 1927 and for each year since 1929. The results have been published in mimeograph bulletins of the Department of Agricultural Economics, the Ohio State University and the Ohio Agricultural Experiment Station in cooperation with Statistical Reporting Service of the U. S. Department of Agriculture.

All cash receipt figures were calculated for the calendar year as in the previous studies since 1939. State totals of cash receipts were supplied by the Farm Income Branch, Economic Research Service. Other data used as a basis for this study were obtained from the Ohio Crop Reporting Service and from the 1959 U. S. Census of Agriculture. Certain changes of methods of calculation become necessary from year to year due to changes in basic sources of information; therefore, figures for some items are not strictly comparable. However, a fair picture of the sources of agricultural cash receipts and their relative importance is given by this study.

State total cash receipts from sales is the same as the published USDA total cash receipts from sales as shown in Tables I, II, IV, V, AND VI. Table III pictures the number of counties classified according to the ranking of main agricultural commodities as a source of cash receipts. Cash receipts from the sale of cull dairy cows and veal calves previously were added to the Dairy enterprise but, since the 1957 study, they are included in cash receipts from cattle and calves. The 1960 cash receipts from the sale of cull dairy cows and veal calves have been estimated at \$31,011,000. The cost of feeder cattle purchased was not deducted from cattle sales. The poultry enterprise includes the cash receipts from eggs, farm chickens, commercial broilers, turkeys, and other poultry. The sheep enterprise includes receipts from sheep, lambs and wool and, in the case of cattle, deduction for the cost of feeder sheep purchased was not made from sales. The vegetable crop enterprise includes canning crops and other vegetables grown for fresh market sales except greenhouse products and potatoes which were estimated separately. The fruit crop enterprise includes cash receipts from small fruits as well as from tree fruits and nuts.

Government payments include payments made under the Agricultural Conservation, Sugar Beet, Conservation Reserve and Wool programs. The Agricultural Conservation payments used here are based on the amounts earned, by counties, during the 1959 and 1960 calendar years which were paid out during 1960. Sugar Beet pay-

ments refers to the amount earned by counties, in 1959, the major portion of which was received by farmers during the 1960 calendar year. Payments under the Conservation Reserve program include payments actually made during 1960. Wool payments include both shorn wool and unshorn lamb payments actually made during 1960. The authors are very grateful to the personnel of the Ohio Agricultural Stabilization and Conservation Service who furnished data on Government payments by counties.

Since a great variation exists in the size of the counties, the estimated cash receipts per farm and per acre have been calculated, by using the 1959 U. S. Census number of farms and acres of all land in farms, to serve as a basis for comparing the counties. These data appear now in Table IV. The low cash receipts per acre in some of the counties is due in part to the fact that the acreage designated by the Census as acres of all land in farms includes a considerable amount of land not actually under cultivation and some not even used for pasture. The Census definition of a farm was changed between 1954 and 1959. For 1959, each place operated as a unit of 10 or more acres from which the sale of agricultural products totaled \$50 or more, as well as each place operated as a unit of less than 10 acres from which the sale of agricultural products totaled \$250 or more, was counted as a farm. For 1954, each place operated as a unit of 3 or more acres on which the value of farm products produced totaled \$150 or more, as well as each place of less than 3 acres from which the value of all agricultural products sold totaled \$150 or more, was counted as a farm. The change in definition of a farm affects the comparability of the data for this year and previous years.

The question is often asked as to whether cash receipts truly represent the importance of individual agricultural commodities in Ohio. The relative importance for some commodities would be rated differently if we include the value of the commodities used on the farm. The value of corn, oats and hay used on farms where produced during 1960 in Ohio have been estimated at 124 million dollars for corn, 23 million dollars for oats and 64 million dollars for hay.

TABLE I

CASH RECEIPTS FROM FARMING AND GOVERNMENT PAYMENTS, OHIO, 1924 - 1960
